

SUB A7

## ABSTRACT

The present invention relates to a method for processing a complex request addressed to at least one SNMP agent (5) of a resource machine (2b) from an SNMP manager (4) of an application machine (2a), consisting of processing said complex request so as to enable an integrating agent (6) to translate said complex request into SNMP requests and to optimize the number of SNMP requests transmitted through the network (3), particularly the number of GETNEXT requests.
